

Dear recruiting team,

My name is Adham Selim, I am a recent graduate from University of Twente and I believe I would be a perfect fit for this role.

I have a great interest in Data Science, specifically AI-powered applications and agentic AI. The last year of university I specifically tailored to learning more about them and utilizing them as much as possible. I worked on multiple projects with a focus on LLM agents and customizing models/agents. Some projects I worked on were to simply utilize LLM APIs for a purpose and there were others that required model fine-tuning and re-training to produce a new specialized mode.

I also focused my graduate thesis on multi-agent systems, where I learned a lot about how LLM agents interact with each other and the potential behind it. I believe this to be extremely helpful for this role.

My goal is to be able to utilize LLM agents and models and push the technology far, as I believe the potential behind it is still being discovered every day.

I look forward to hopefully hearing back from you soon,
Adham Selim
