Enschede, Netherlands | +31 627822665 | adhamselim.uni@gmail.com | [linkedin.com/in/adham-selim](https://www.linkedin.com/in/adham-selim) | adhamselim.framer.website

OBJECTIVES

To build scalable data and AI products, turning ideas into reliable, production-grade systems and GenAI applications. Particularly interested in agentic AI and especially multi-agent systems for automation and reliable acceleration of tasks.

EXPERIENCE

Student Intern

Ortes B.V.

February 2026 – April 2026

Deventer, Netherlands

- Built and demoed an interactive AI dashboard MVP directly for client Ortes B.V., integrated with their existing system.
- Architected the dashboard's API integration layer with the PandasAI library so it works plug-and-play across multiple LLM providers.
- Authored a 37-page feasibility report advising stakeholders on rollout, translating technical trade-offs into business-facing recommendations.

Co-Founder

Mochi

February 2025 – Present

Enschede, Netherlands

- Co-founded Mochi, a conversational virtual-companion app for stress and time management, grounded in HCI principles.
- Advanced to the top 40 teams (of over 80 applicants) in the UT Challenge 2025 entrepreneurship competition.
- Built and iterated a working prototype in Figma and HTML/React based on direct user feedback.

Teaching Assistant / Mentor

University of Twente

September 2024 – July 2026

Enschede, Netherlands

- Mentored 100+ students across multiple Business Information Technology and Computer Science courses, translating technical concepts for varying skill levels.
- Ran weekly progress-check meetings with mentees to diagnose blockers and course-correct quickly.
- Graded hundreds of assignments and multiple team projects, prioritizing constructive, actionable feedback.

RESEARCH

MAYA: A Collaborative Multi-Agent System for Accelerating Academic Literature Review | [Link](#)

- Designed and built a multi-agent system architecture, using langchain/langgraph, with an MCP server for standardized, real-time database communication.
- Gave users the freedom to choose between LLMs and databases, achieving retrieval speeds up to 2x and data-extraction speeds up to 100x faster than manual review.
- Reached data-retrieval quality comparable to a human reviewer, evidenced by a 63% Jaccard similarity score.

PROJECTS

Gramm3 – CALL: Teaching English to Arabic native speakers

- Fine-tuned a Google Gemma model using Unsloth with QLoRA 4-bit quantization to create a lightweight, deployable model.
- Built for Computer-Assisted Language Learning, specifically teaching English to Arabic native speakers.
- Achieved ~80% accuracy on corrected sentences across ~90% of test cases, scoring 84–95% across BLEU and ROUGE metrics.

Sign to Speech: Real-time ASL translation into speech and text

- Trained a custom CNN model on public ASL hand-skeleton datasets using TensorFlow/Keras.
- Used the MediaPipe Python library with camera/video input normalization for real-time translation.
- Containerized the model with Docker to run on a Raspberry Pi 5 as a portable device with a camera and touchscreen.

Note-Bridge Forum: Online interactive forum for music enthusiasts

- Built a forum website with HTML, CSS, and Bootstrap for startup client Note-Bridge, as a university project with a team of 5.
- Designed a normalized PostgreSQL schema of 13 tables with protections against SQL injection.
- Built full account creation and management, enabling collaboration and communication between users.

AnalystGPT: explain the effect of stock market metrics on analyst recommendations

- Trained a custom model on real-time financial data from the S&P 500, using the decision tree classifier.
- Predicts stock buy/hold/sell recommendations with accuracy of 69.7%
- Relies on XAI concepts and the tool to analyze and explain the effect of various stock market metrics on analyst recommendations.

EDUCATION

University of Twente

BSc Business Information Technology | Weighted Average: 7.85/10.0

Enschede, Netherlands

Graduated: July 2026

LANGUAGES & TECHNOLOGIES

Tech Languages: Mostly used: Python, **Have worked with:** Java, SQL, JavaScript/TypeScript, HTML/CSS

Frameworks & Libraries: Pandas/PandasAI, FastAPI, PyTorch, Scikit-Learn, TensorFlow

Tools & Platforms: Git/GitHub, Docker, Ollama, LLM APIs, Cursor, Claude

Languages: English (Fluent), Arabic (Native)

Dear recruiting team,

My name is Adham Selim, I am a recent graduate from University of Twente and I believe I would be a perfect fit for this role.

I have a great interest in Data Science, specifically AI-powered applications and agentic AI. The last year of university I specifically tailored to learning more about them and utilizing them as much as possible. I worked on multiple projects with a focus on LLM agents and customizing models/agents. Some projects I worked on were to simply utilize LLM APIs for a purpose and there were others that required model fine-tuning and re-training to produce a new specialized mode.

I also focused my graduate thesis on multi-agent systems, where I learned a lot about how LLM agents interact with each other and the potential behind it. I believe this to be extremely helpful for this role.

My goal is to be able to utilize LLM agents and models and push the technology far, as I believe the potential behind it is still being discovered every day.

I look forward to hopefully hearing back from you soon,
Adham Selim
